

The Game of Forks

At the start of the game, each student is given a fork with another student's name on it. This is their target. To eliminate their target, a student must use their fork to lightly tap their target on the shoulder, which counts as a kill. When this happens, the student inherits their killed target's fork, and their new target becomes the killed student's target. The recipient of the fork must enter their new target at ncssmforks.com for the kill to be considered valid. The game continues until only one student remains. The last student standing wins. To protect yourself from a student who has your name, you can touch your fork to your nose. While your fork is touching your nose, you are safe and immune to being killed.

Safe Zones

You cannot be eliminated in the following areas:

- Your own dorm
- Bathrooms and showers
- A student's hall while walking to the showers
- Cafeteria during meal hours
- Fablab during class hours
- SWAC/Underhill while working out
- Music practice rooms while practicing
- Classrooms during, and in the 5 minutes before and after, class. You must be inside the classroom to be protected. This includes labs or outdoor class activities
- Registered forums, sports, etc., during advertised hours
- While doing hours for senior leadership or campus service
- Everywhere off campus

How Kills Work

- When you kill someone, input who you killed in our system
- When you are killed, go into the system and approve that you were killed immediately as a courtesy to your opponents
 - You may contest kills if kill was not valid within six hours
 - If not contested within six hours, automatic approval is administered
 - Approval is final.

Additional Clarifications

- To be safe, you must use a fork, not any other utensil, to touch your nose. It does not have to be the fork with your target's name on it
- Keep your fork supported with your fingers while protecting yourself. Do not tape or stick it to your nose
- Contact must remain gentle. Avoid running or rough behavior.
 - If this is violated, **major violations** and **disqualification** will be administered.
- DM the Forksmasters, Elle Hernandez (hernandez26l@ncssm.edu) and Sophia Li (li26s@ncssm.edu) if your fork is broken and you need a replacement

Special Thanks

Special thanks to Evan Kim for helping develop the 2026 game website, and thank you to the Student Affairs committee for assisting in putting together the first annual game of Forks at NCSSM-Morganton. Go Dragons!
